MUHAMMAD HUZAIFA

Full Stack Developer · MERN / MEAN Stack

+92 312 778 6712 | muhammadhuzaifa7012@gmail.com | Islamabad, Pakistan | github.com/Huzaifa4472

TECHNICAL SKILLS

Frontend

- React.js
- Next.js
- Angular
- HTML5 & CSS3
- Tailwind CSS
- SASS
- Styled-Components

Backend

- Node.js
- Express.js

Database

- MongoDB
- Redis

Cloud & APIs

- AWS S3
- SendGrid
- OpenAI API
- Socket.io

Deployment

- Vercel
- Nginx

Other

- JavaScript ES6+
- REST APIs
- Git & GitHub
- Bitbucket
- Responsive Design

LANGUAGES

English — Professional Working Proficiency
Urdu — Native / Fluent

SOFT SKILLS

- Team Collaboration
- Problem Solving
- Clean Code Advocate
- Continuous Learning
- Time Management

EDUCATION

COMSATS University
B.S. Software Engineering
2020 – 2024
GPA: 2.8 / 4.0

Superior College
Intermediate – Computer Science
2017 – 2019

PROFILE

Passionate Full Stack Developer with 3+ years of professional experience designing and delivering scalable, production-grade web applications. Specialized in the MERN and MEAN stacks with a proven track record across e-commerce, EdTech, AI-driven tools, security/surveillance analytics and rental platforms. Skilled at integrating third-party APIs, payment gateways and cloud services — from Helcim and SendGrid to AWS S3 and OpenAI. Committed to clean architecture, performance optimization and shipping reliable software in fast-paced team environments.

WORK EXPERIENCE

Frontend Developer
May 2026 – Present
Canopy Intel AI

- Building the frontend for an AI-powered, camera-based person-detection platform used for security and informational analytics.
- Developing dashboards for mall analytics — visitor counts, estimated age groups and heatmaps of the zones visited most.
- Building interfaces for construction-site monitoring — live headcount of workers on site, vehicle counts by category, and PPE compliance (helmet and vest detection) alerts.
- Integrating live camera feed data and detection results into real-time, chart-driven React dashboards.
- Working closely with the computer-vision/backend team to surface detection events and analytics in a clear, usable UI.

Full Stack Developer (Contract)
Jun 2025 – Dec 2025
USA Peptides Lab

- Developed a full-stack e-commerce platform for product sales and purchases over 6 months.
- Built React.js frontend and Node.js/Express backend with MongoDB database.
- Implemented role-based access, admin revenue dashboard and Helcim payment integration.

MERN/MEAN Stack Developer
Jan 2025 – Mar 2025
THT Cars Rental

- Built a car rental platform with React.js frontend and Node.js/Express backend.
- Integrated third-party APIs to streamline booking, rental management and UX.

MERN/MEAN Stack Developer
Jul 2024 – Present
Walee Technologies

- Developing and maintaining multiple client-facing web applications.
- Collaborating with cross-functional teams to deliver scalable, production-ready software.

Junior MERN Stack Developer
Apr 2024 – Jul 2024
Deventia Tech

- Delivered high-quality software solutions alongside senior engineers.
- Contributed full-stack features improving code efficiency and delivery.

MERN Stack Intern
Jul 2023 – Oct 2023
Walee Technologies

- Built real-world features in React.js, Node.js and MongoDB over 4 months.
- Gained hands-on REST API development experience in an agile team.

KEY PROJECTS

Canopy Intel AI — Camera-Based Person Detection & Analytics

Frontend Development · React.js · Real-Time Dashboards · Computer Vision Integration

- AI-driven platform that uses cameras to detect and analyze people for security and informational purposes.
- Mall analytics module: tracks visitor footfall, estimated age brackets, and which zones/sections are visited most.
- Construction-site module: monitors how many employees are working together, counts and categorizes construction vehicles on site, and detects whether workers are wearing required safety gear (helmets, vests).
- Built responsive, real-time frontend dashboards to visualize detection data and alerts as they stream in.
- Working on this project since May 2026, currently ongoing.

USA Peptides Lab

MERN Stack · React.js · Node.js · Helcim API · MongoDB

- Developed full-stack e-commerce platform for product sales and purchases.
- Implemented role-based access control — Admin, Staff and Customer roles.
- Admin panel with detailed revenue analytics, order management and inventory tracking.
- Helcim payment gateway integrated for secure, compliant transaction processing.
- Product catalogue with category filters, cart, checkout and order history.

Learning Management System (LMS)

MEAN Stack · Angular · Zoom API · Redis · SendGrid · AWS S3

- Built on the MEAN stack (MongoDB, Express.js, Angular, Node.js).
- Students enroll in course slots and join live classes via Zoom API integration.
- Semester content: video lectures, assignments, quizzes and attendance tracking.
- End-of-semester exams with a full academic calendar managed per course.
- Role-based admin panel — Super Admin and Teachers manage content and students.
- Redis for session caching and performance on high-traffic routes.
- SendGrid for transactional emails: confirmations, reminders and alerts.
- AWS S3 for scalable cloud storage of videos, documents and media assets.

Data2u — AI-Powered Data Enrichment

MERN Stack · OpenAI API · Assistants API · Socket.io

- Two-part platform predicting and filling missing attributes in uploaded product files.
- OpenAI and Assistants API integrated to intelligently infer missing product data.
- Socket.io enables real-time batch processing of large datasets in manageable chunks.
- Live progress updates streamed to the client as each batch completes server-side.

THT Cars — Car Rental Frontend

Next.js · React.js · Tailwind CSS · REST APIs

- Built a fully responsive car rental frontend using Next.js with server-side rendering.
- Location-selective booking flow for pickup and drop-off point selection.
- Reservation system with date/time selection, vehicle browsing and booking confirmation.
- Integrated with backend APIs for real-time vehicle availability and management.

e-People — HR & Performance Management System

MEAN Stack · Angular · Node.js · MongoDB · Express.js

- Contributed as a team member to a full-scale HR platform built for software organizations.
- Performance goal-setting module allowing managers to define, assign and track employee objectives.
- Assessment and appraisal system enabling managers to review and rate employee progress periodically.
- Attendance management with check-in/check-out tracking and detailed attendance reports.
- Employee dashboard to view personal goals, assessments, attendance history and feedback.
- Manager dashboard with team oversight, review workflows and performance analytics.
- Role-based access for Super Admin, Managers and Employees across all modules.

NFT Marketplace

MERN Stack · React.js · Node.js · MongoDB

- Full-featured platform for minting, listing and trading NFTs.
- Advanced search filters, customizable user profiles and secure transaction system.

Dadi Rent Boat

MERN Stack · React.js · Node.js · Payment Gateway

- Boat rental web app with real-time availability and detailed boat listings.
- Customer reviews and secure payment processing for seamless bookings.
